

# Burswood International Resort Casino

*“A fantasy of glittering lights, colour and special visual effects will greet visitors when they arrive”*

*Exciting Special Effects*

*Star Ceilings*

*Distinctive Colonnade Illumination*

Burswood International Resort Casino has become a world leader in the use of special lighting effects and state-of-the-art technology with a major lighting refurbishment of its main gaming floor and environs.

Visitors to the new look casino in Perth, Western Australia are greeted by a kaleidoscope of glittering lights, colour, movement, and special visual effects.

These effects were achieved using fibre optic systems detailed and developed by Digilin Australia working in conjunction with their local distributor NMA Lighting, who also supervised the installation. Lighting design was created by Lighting Images, lighting consultants, in conjunction with architects Silver Thomas Hanley. Lighting Images utilized a unique self developed computer graphic visualization technique Lightmaster, in the design proposals.

The ceilings of the main gaming floor have been dramatically transformed with the installation of lines of fibre optic lighting and new feature chandeliers, fitted with ‘colour dynamic’ projectors. The granite flooring in the Casino’s main entrance was renewed incorporating in-floor Fibre Optic Lighting utilizing new resin technology, providing a spectacular Brass Logo Lightbox feature.

*Unique Illuminated In-floor System*

*Step Illumination*

*Glass Wall and Halo*

*Architectural Highlighting*

The entrance ceiling dome features a starscape of the Southern Hemisphere sky, circled by exploding crystal features.

The entry statements to the gaming floor are provided with a ‘Feng Shui’ feature in the form of a Cosmic Swirl luminaire above, and a cascading ‘river of light’ incorporating ‘ART WRAP’ which is a cleverly interwoven network of stretchable and formable fibre optics cables.

A large Two-up ring incorporating fibre optics to create a colorful ‘HALO’, and floating glass block walls add a new dimension to the quintessential Australian game.

Externally the Entry Porte Cochere is a blaze of colourful floating coffers supported and suspended by columns crowned with wrap-around capitals of

internally illuminated resin, that also incorporate column uplights and downlights.

The lighting is controlled by a DMX computer system with programs written to provide ever changing effects of colour, mood, intensity, and interest. The fibre optic lightsources incorporate a unique ‘MICRO-STEPPING’ facility ensuring smooth transitions or instantaneous colour changing with up to 36 colours. Multicolour dynamic chasing was achieved in the fibre optic cables using state-of-the-art sequencing technology developed by DIGILIN.

The maintenance of the system is completely removed from the gaming floor ensuring no interruption to the ‘24 hours a day’ gaming operation.

The refurbishment has injected the Casino with the vitality of a modern, electric new atmosphere.
