Digilin fibre optic lighting systems were selected by Barry Webb and Associates for the lighting of extensive areas of the exterior landscaping of the Casino.

The project included:

173 DMX controlled 150w MH light sources

6.8 km of SV84 side-lighting cable for step lighting

5km of end lighting cables for the lighting of awnings, water rill, tree sculptures and star walls

and 148 specially engineered knurled acrylic rods for the lighting of the Awnings

The system allows for the selection of the colour and operation of each light source, allowing for a vivid and interactive display with set themes and shows.

Digilin were proud to be chosen for this project and believe that the final result justifies the hard work of all concerned
